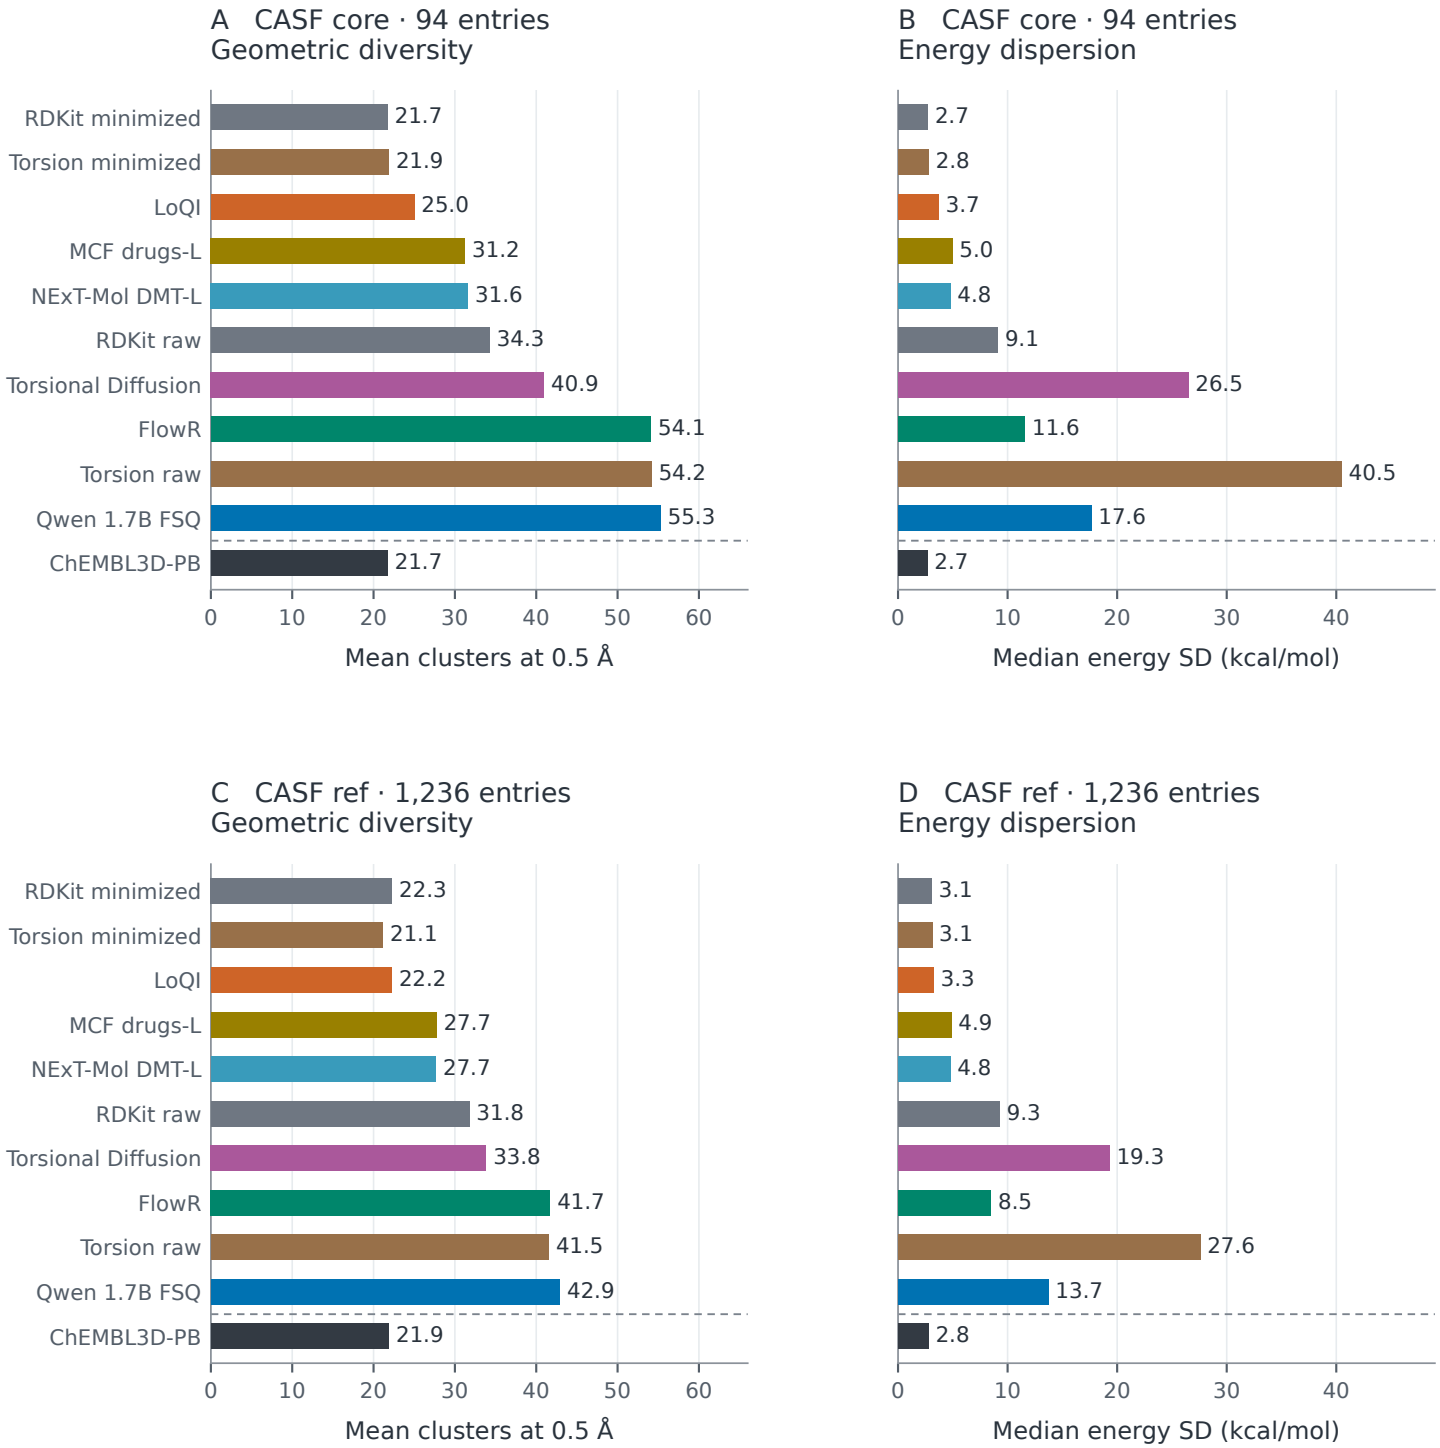
ChEMBL-count target · geometry and energy spread

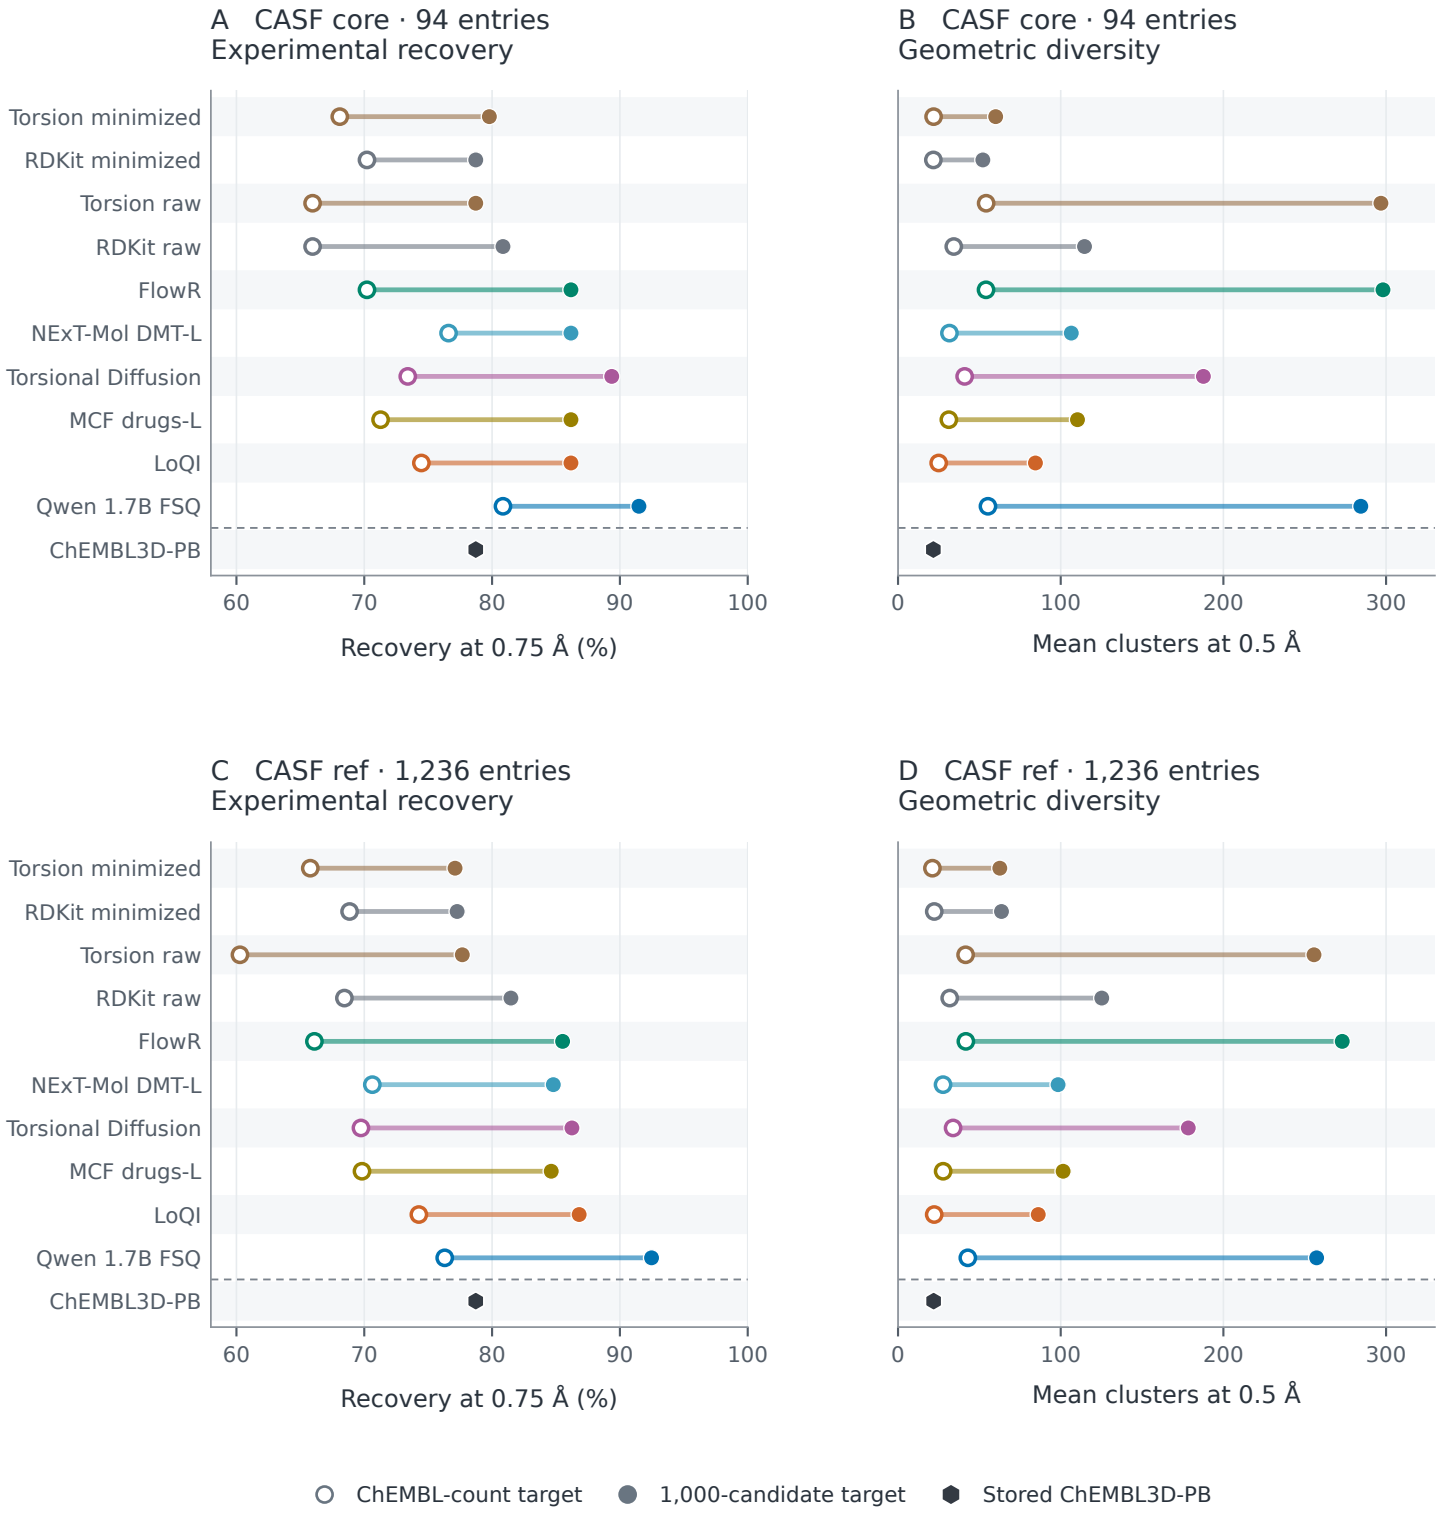
Figure 3 preview · matching panel scales and method order



Both datasets: common MMFF94s protocol, rebuilt hydrogens, no coordinate optimization.
Energy dispersion is the median within-ensemble population SD across molecules.

Candidate targets · recovery and geometric diversity

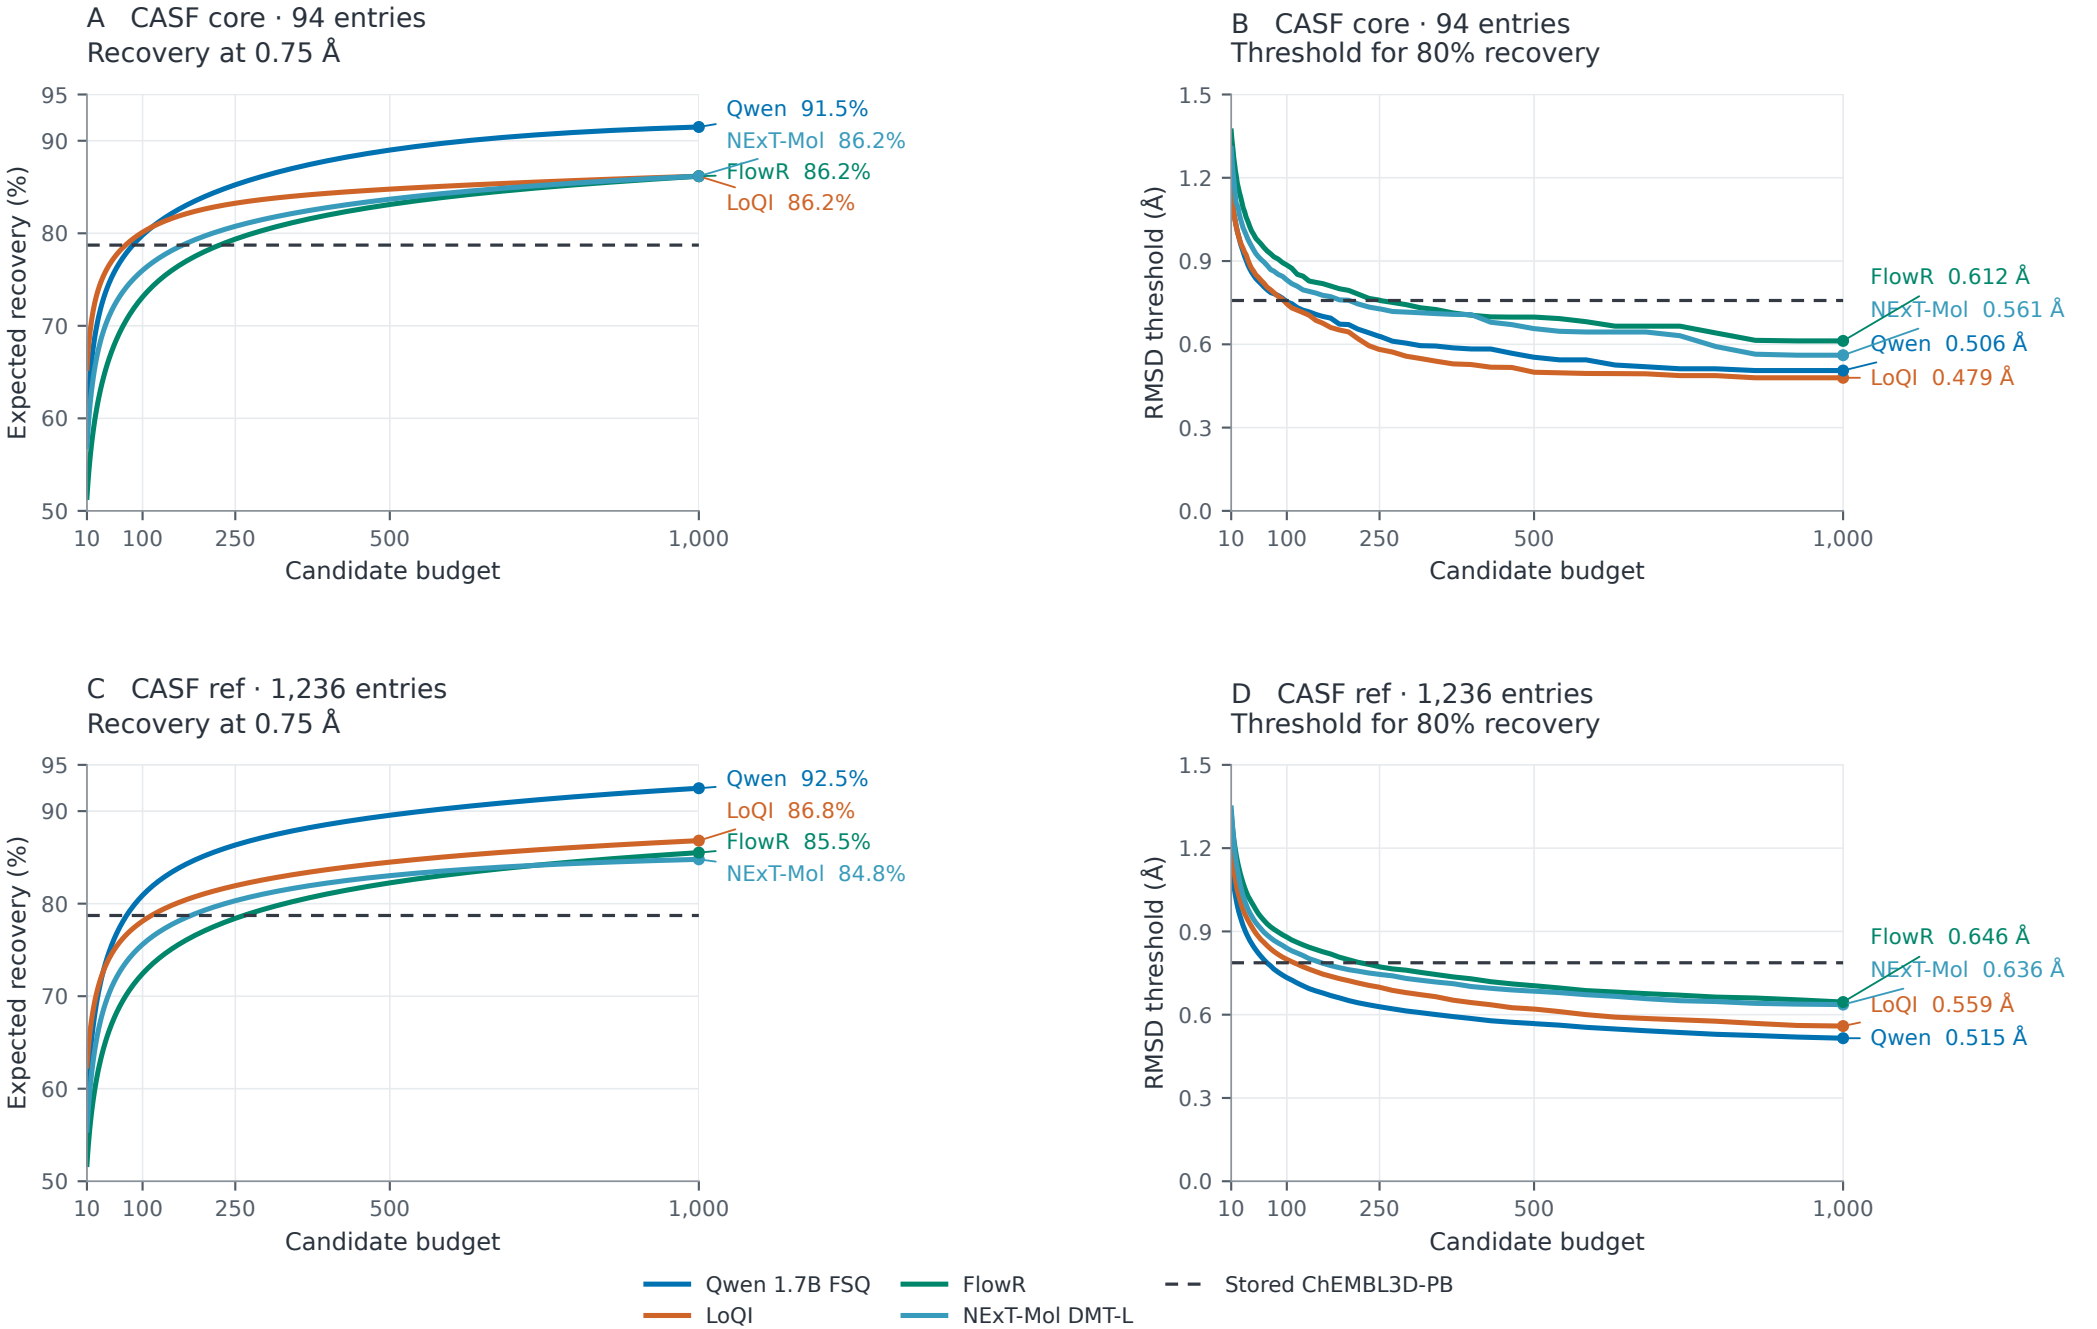
Figure 4 preview · same method order and axes across datasets



Lines join two evaluated targets; retained counts and computing costs are not matched.

Sampling budget, recovery, and matching tolerance

Figure B1 preview · exact finite-pool curves for both datasets



Rejected candidates consume budget. Dashed lines show each dataset's full stored ChEMBL3D-PB ensemble.
